

2.0 Planning Process

The preparation of the Ramona Road Master Plan was initiated in March 2001 with the intention of providing a tool to guide County decision-making in relation to local transportation system improvements in Ramona, preservation and enhancement of local accessibility, and land development considerations that affect local circulation. The Plan is also intended to provide input to the County's General Plan 2020 Update process for the Community of Ramona by presenting preliminary information on circulation problems within the community.

The County of San Diego receives advisory input from the Ramona Community Planning Group regarding land development and transportation issues. For purposes of developing the Ramona Road Master Plan, a Ramona Road Master Plan Advisory Committee was formed. The Advisory Committee included representatives from the Ramona Community Planning Group, the Ramona School District, the California Highway Patrol, the Ramona Fire Department, the Ramona Water District, Chamber of Commerce, and the North County Transit District. County staff worked with the Advisory Committee to identify transportation deficiencies in Ramona. The Advisory Committee directed tours of the Ramona community during which problems were viewed firsthand by County staff and consultants. Subsequent meetings were held with the Advisory Committee to provide comments and direction during the data collection, problem formulation, and plan development process. ❖
